#### **DETAILED ACTION**

#### Response to Amendment

Upon review of applicant's request for reconsideration, the 103 rejection of claims 1-43 is withdrawn.

### Claim Objections

Claim 16 is objected to because of the following informalities:

• Step (d) refers to itself instead of step (c).

Appropriate correction is required.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6, 9-13, 16-18, 21-24, 27-32, 35-37, 39-42 and 44-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent No. 6,123,330 to Schaal.

In regard to claims 1, 9, 16, 21, 27-28, 29, 35-36, 37, 39-40, 44, 46 Schaal discloses a method for controlling a sheet feeding device. The disclosure teaches a method for monitoring resource units (sheets) which includes

• providing a group of sheets (See Fig. 1)

Art Unit: 3653

• determining a thickness of one or more resource units (Col. 1, lines 60+; Col. 2, lines 27+).

• determining when the group of sheets reaches a predetermined size after one or more of the resource units has been moved from the group and responsive to the determination of thickness in step (b) (Col. 2, lines 33+; Col. 2, lines 44+).

Schaal fails to disclose an indicator for indicating when the stack is at a predetermined height (i.e. when the separating blade is approaching position sensor), however indicators for stack height are well known in the art (See for example US Patent No 5,971,392 to Lee Col. 7, lines 16+). Therefore, it would be obvious to one of ordinary skill in the art to add this feature to Schaal's device.

In regard to claim 2, 10, 22, 30 and 45, Schaal's device is a mail conveyor.

In regard to claims 3, 11, 23, 31, 5, 13 and 17, Schaal appears to detect the size of the stack before any sheets are removed from the stack. Since the position sensors are constantly checking the position of the separating blade (Col. 2, lines 44+), Schaal would detect the size of the stack before and during the removal of the sheets.

In regard to claim 4, 12, 24, 32 Schaal discloses a sensor which detects when the size of the stack is less than a second predetermined size (See S2 in Fig. 1)

In regard to claim 6, 18 Schaal feeds the sheets from the bottom of the stack (See Fig. 1).

In regard to claim 41 and 42, Schaal discloses a main controller (HR).

Application/Control Number: 10/085,357

Art Unit: 3653

Allowable Subject Matter

Claims 7-8, 14-15 and 19, 20, 25-26, 33-34, 38, 43 objected to as being dependent upon a

rejected base claim, but would be allowable if rewritten in independent form including all of the

limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Matthew J. Kohner whose telephone number is 703-305-8496.

The examiner can normally be reached on Mon-Fri 9-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Donald Walsh can be reached on 703-306-4173. The fax phone numbers for the

organization where this application or proceeding is assigned are 703-305-7687 for regular

communications and 703-305-7687 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding

should be directed to the receptionist whose telephone number is 703-308-111/3.
